SUMMARY

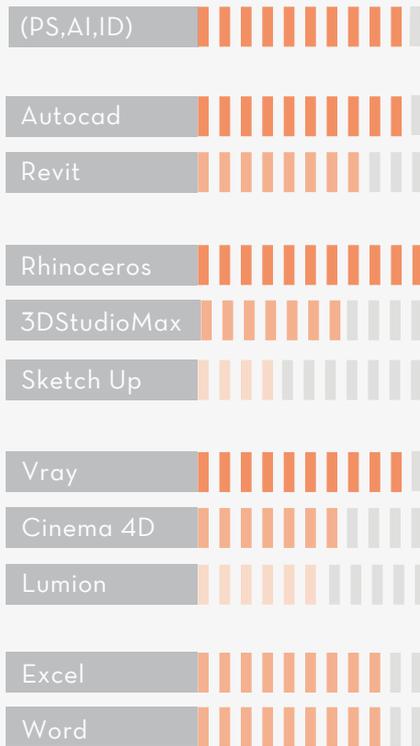

The experiences made so far as an architect have led me to become a versatile professional figure today. During academic years I studied in six different cities, comparing myself with different cultures and ways of working.

My professional experience began in Turin and, over the last five years, I have worked on many architecture projects from small to large scale, acquiring skills in reading the urban fabric and applying sustainable solutions for architecture. In the continuous comparison that comes from teamwork, I have always faced the whole with creativity and dynamism, doing every day a constant job to improve the accuracy and punctuality of deliveries.
